

UNIFIED  
hiv health and beyond

## WHAT DOES YOUR NEEDLE LOOK LIKE?

800-872-2437 • [www.miunified.org](http://www.miunified.org)

## SKIN IS TOUGH!

Every time you hit, your skin barbs the point.  
Damaged points can lead to:

Abscesses  
Infections  
Blown Veins

## SAVE YOUR VEINS

If you miss your vein, re-load a new syringe and try again.  
Don't use the same point to hit over and over again. Trying  
to sharpen a used point makes more barbs.  
Don't use the tip of your need to mix your hit.

## USE A BRAND NEW SYRINGE EVERY TIME

Shooting illegal drugs is not safe or good for your health. It  
puts you at risk for overdose, HIV, hepatitis B, hepatitis C  
and other serious infections.

Help protect yourself and other- use a brand new syringe  
every time you inject or divide drugs.

FOR INFORMATION ABOUT SYRINGE ACCESS,  
OVERDOSE PREVENTION, HIV, HEPATITIS OR
